AccountGreeter Apex Code

Deployed to dev org. Deployment ID: 0AfV900000EbtblKAB

1. classes/AccountGreeter.cls

APEX

```apex
public with sharing class AccountGreeter {
    /**
     * Returns a greeting for the given account.
     * @param acc The account to greet (may be null)
     * @return A greeting string
     */
    public static String getGreeting(Account acc) {
        return 'Hello';
    }
}
```

2. classes/AccountGreeter.cls-meta.xml

XML

```xml
<?xml version="1.0" encoding="UTF-8"?>
<ApexClass xmlns="http://soap.sforce.com/2006/04/metadata">
    <apiVersion>60.0</apiVersion>
    <status>Active</status>
</ApexClass>
```

3. classes/AccountGreeterTest.cls

APEX

```apex
@IsTest
private class AccountGreeterTest {
    @IsTest
    static void returnsGreetingForAccount() {
        Account acc = new Account(Name = 'Test Account');
        Test.startTest();
        String result = AccountGreeter.getGreeting(acc);
        Test.stopTest();
        System.assertEquals('Hello', result, 'Expected the standard greeting');
    }

    @IsTest
    static void returnsGreetingForNullAccount() {
        String result = AccountGreeter.getGreeting(null);
        System.assertEquals('Hello', result, 'Expected the greeting even when the account is
null');
    }
}
```

4. classes/AccountGreeterTest.cls-meta.xml

XML

```xml
<?xml version="1.0" encoding="UTF-8"?>
<ApexClass xmlns="http://soap.sforce.com/2006/04/metadata">
    <apiVersion>60.0</apiVersion>
    <status>Active</status>
</ApexClass>
```
